

## CHAPTER 5

### CONCLUSION

In connection with the analysis in the previous chapter in the “*Hidden Figures*” movie script using an intrinsic approach that includes characterization, plot and setting, and also through a genetic structuralism theory, I can finally draw conclusions.

I conclude that the intrinsic approach can be used to analyze the *Hidden Figures* movie script. For characterization, I used the showing method to understand the characterization of Katherine, Mary they are the main character from this movie script. They are a smart confident, brave, toughness, strong mind and caring character. While the plot is also very supportive of the characterization and setting and this movie script. Plot is the main part of the movie because it is used to explain the chronology of an event that has been made by the director. The setting used is Hampton in the 1960s to support the five kinds of settings that have been discussed in the previous chapter.

For the extrinsic approach, I use Discrimination theory by Fred L Pincus It was inevitable that the literature case on the racial discrimination in the *Hidden Figures*'s Movie Script. Racial Discrimination occurred when someone was treated less favorably than another person because of their race, color, nationality or ethnic origin. According to Fred L (Pincus F. L., 1996), Racial discrimination classified in three types which are individual discrimination, institutional discrimination, and the last structural discrimination. These three types have different classifications. I use two types of racial discrimination which are individual discrimination and institutional discrimination. Most racial discrimination occurs in the office such as in the computing room, in the Space Task Group, in the Zielensky's room, etc. But apart from that, racial discrimination also occurs in several places, such as the public library, courtroom, etc. At NASA, racial discrimination was very dominant. Almost all employees at NASA were white people. This made white people the majority at NASA. And the colored was a minority who did not have the power like that of the white race.

In the world of work, with race assumed that colored did not have more abilities than white race. So white race was considered better than colored. However, the three roles Mary, Katherine, Dorothy were great women who dare to argue to defend the existence of colored. They proved that the colored, which they considered as a backward race, poor, stupid, had no potential, was not true. Everyone had equal rights in social treatment.

Not only at NASA, racial discrimination also occurred in several places in America, namely in the courtroom, Hampton School, and Public Library. The place also had a policy regarding colored. White race got special treatment than colored. While colored got any restrictions. In fact, it was very visible with the separation of bookshelves between colored and white races. Even though they had the same rights, and they should be free to look for books on the White Race shelf and vice versa. So it can create an attitude of tolerance and also like human beings who need each other.

The discriminator must have some reason or problem why they do that kind of behavior. In this Movie Script there was stereotype between white race and colored. White race thought that colored had many weaknesses and especially in the world of work the white race was the full holder of power. It was because they considered that colored had no potential in education or education. In fact, what they concluded was that they were actually generalizing to a group, and not evaluating individuals.

The moral value contained in this research is, we don't always have to rebel when we want to demand something. We can make an effort like these three main character. I hope this research will increase knowledge about Fred L Pincus theory about the type of Racial Discrimination and sociology of literature. I also hope that this research can be useful for those who are interested in deepening their knowledge of analyzing a literary work using Fred L Pincus theory. Hopefully this research can add information and can also be used as a comparison to write a better analysis for further research.
