

BAB V

PENUTUP

KESIMPULAN

1. Pembuangan limbah cair yang mengandung sisa minyak dari bilga kamar mesin keluar kapal dilarang dalam area 12 mil dari daratan, dan pembuangan minyak bilga kapal ke laut di luar area 12 mil diatur oleh IMO dengan dibatasi maksimum 15 ppm minyak bebas dalam air, dan di daerah tertentu seperti Laut Tengah, Laut Merah, Antarctica dan Alaska dibatasi lebih rendah lagi. serta peralatan pemisah minyak yang dipakai harus mendapat *approval* dari IMO.
2. Pengendalian limbah pencemar dari limbah buangan kapal, mudah ditangani dan tidak akan menimbulkan kerusakan atau gangguan terhadap lingkungan hidup di sekitarnya, asalkan dari semula dampak negatif yang akan ditimbulkannya dapat diwaspadai atau dengan perkataan lain kalau dari semula para petugas yang akan menanganinya di lapangan / kapal sudah tanggap terhadap permasalahan dampak lingkungan hidup yang akan ditimbulkannya.
3. *Oil Water Separator* (OWS), peralatan pemisah minyak untuk memisahkan minyak dalam aliran buangan dari bilga kamar mesin, hingga kandungan minyak di bawah 15 ppm.
4. *Oil Discharge Monitor* (ODM), adalah alat untuk memonitor dan mengontrol pembuangan air *ballast* dari kapal tanker yang disesuaikan dengan peraturan/persyaratan.

Kedua peralatan tersebut diatas mempunyai kegunaan yang sama yaitu membatasi pembuangan limbah cair / minyak ke laut. Sejak pertama kali

peraturan IMO dikeluarkan, betapa pentingnya menjaga lindungan lingkungan laut, karena laut sebagai sumber hayati, sumber mineral, sumber energi dan sebagai media/moda transportasi untuk angkutan barang dan manusia.

SARAN - SARAN

Negara Republik Indonesia adalah negara kepulauan, yang letak geografis adalah sangat strategis, dan dapat dilayari dari Utara ke Selatan dan dari Barat hingga ke Timur. Sebagai negara kepulauan sudah tentu diantara pulau adalah lautan yang mengelilinginya.

Dengan pesatnya kemajuan di kota-kota besar di Indonesia, maka moda transportasi laut adalah angkutan yang lebih murah dibandingkan angkutan lainnya, oleh karena itu diperlukan kewaspadaan bagi adanya pencemaran lingkungan laut yang diakibatkan oleh kapal-kapal yang melayari lautan di Indonesia.

Untuk menjamin agar laut di Indonesia bersih dari limbah cair yang dibuang oleh kapal-kapal, pemerintah Republik Indonesia harus betul-betul melaksanakan dan menerapkan aturan-aturan yang dikeluarkan oleh badan dunia (IMO) yaitu dengan cara:

- Memeriksa dengan sungguh-sungguh semua kapal-kapal yang berlayar di lautan dan berada di pelabuhan Indonesia melaksanakan aturan IMO secara konsisten.
- Menyediakan sarana dan pra-sarana pelabuhan di Indonesia untuk dapat menampung dan menerima buangan limbah cair yang bercampur minyak, untuk diproses di darat.

1.9. Perubahan besar (bilamana dilakukan):
Major conversion (if applicable)

1.9.1. Tanggal kontrak perubahan
Date of conversion contract

1.9.2. Tanggal perubahan dimulai
Date on which conversion was commenced

1.9.3. Tanggal penyelesaian perubahan
Date of completion of conversion

10. Golongan kapal :

Status of ship

1.10.1. Kapal baru sesuai dengan aturan 1 (6)
New ship in accordance with Regulation 1 (6)

1.10.2. Kapal lama sesuai dengan aturan 1 (7)
Existing ship in accordance with regulation I(7)

1.10.3. Kapal minyak baru sesuai dengan aturan 1 (26)
New oil tanker in accordance with regulation I (26)

1.10.4. Kapal tangki minyak lama sesuai dengan aturan 1 (27)
Existing oil tanker in accordance with Regulation I (27)

1.10.5. Kapal telah diakui oleh pemerintah sebagai sebuah "Kapal lama" menurut aturan 1 (7) karena keterlambatan yang tidak diduga waktu penyerahan.
The ship has been accepted by the Administration as an "existing ship" under Regulation 1 (7) due to unforeseen delay in delivery.

1.10.6. Kapal itu telah diakui oleh Pemerintah sebagai sebuah "Kapal tangki minyak lama" menurut Aturan 1 (27) karena keterlambatan yang tidak diduga waktu penyerahan.
The ship has been accepted by the Administration as an "existing oil tankers" under Regulation I (27) due to unforeseen delay in delivery.

1.10.7. Kapal tidak disyaratkan untuk memenuhi ketentuan-ketentuan dari Aturan 24 karena keterlambatan yang tidak diduga waktu penyerahan.
The ship is not required to comply with the provisions of Regulation 24 due to the unforeseen delay in delivery.

1. Jenis kapal:

Type of ship

1.11.1. Kapal tangki minyak mentah.
Crude oil tanker.

1.11.2. Pengangkut hasil olahan.
Product carrier.

1.11.3. Kapal tangki minyak mentah dan Pengangkut hasil olahan.
Crude oil tanker and Product carrier.

1.11.4. Pengangkut kombinasi.
Combination carrier.

- 1.11.5. Kapal yang bukan kapal tangki minyak dengan tangki-tangki muatan tunduk dibawah Aturan 2 (2) Annex I dari Konvensi.
Ship other than an oil tanker, with cargo tanks coming under Regulation 2(2) of Annex I of the Convention.
- 1.11.6. Kapal tangki minyak yang digunakan sebagai pengangkut hasil olahan yang termasuk dalam Aturan 15(7).
Oil tanker dedicated to the carriage of products referred to in Regulation 15 (7).
- 1.11.7. Kapal ini, yang telah ditunjuk sebagai "kapal tangki minyak mentah" yang bekerja dengan COW, juga ditunjuk sebagai "pengangkut hasil olahan" yang bekerja dengan CBT, untuk mana Sertifikat IOPP tersendiri juga telah dikeluarkan.
The ship, being designated as a "crude oil tanker" operating with COW, is also designated as a "product carrier" operating with CBT, for which a separate IOPP Certificate has also been issued.
- 1.11.8. Kapal ini, yang telah ditunjuk sebagai "kapal tangki minyak olahan" yang bekerja dengan CBT, juga ditunjuk sebagai "kapal tangki minyak mentah" yang bekerja dengan COW, untuk mana Sertifikat IOPP tersendiri juga telah dikeluarkan.
The ship, being designated as a "product carrier" operating with CBT, is also designated as a "crude oil tanker" operating with COW, for which a separate IOPP Certificate has also been issued.
- 1.11.9. Kapal tangki bahan kimia yang mengangkut minyak.
Chemical tanker carrying oil.

**PERLENGKAPAN PENGENDALIAN PEMBUANGAN MINYAK DARI
BILGA-BILGA RUANG PERMESINAN DAN TANGKI-TANGKI BAHAN
BAKAR (ATURAN 10 DAN 16).**
EQUIPMENT FOR THE CONTROL OF OIL DISCHARGE FROM MACHINERY SPACE BILGES AND OIL FUEL TANKS (REGULATIONS 10 AND 16).

Pengisian air tolakbara di dalam tangki-tangki bahan bakar minyak.
Carriage of ballast water in oil fuel tanks :

- 2.1.1. Kapal boleh membawa air tolak bara dalam tangki-tangki bahan bakar minyak pada kondisi normal.
The ship may under normal conditions carry ballast water in oil fuel tanks.

Jenis perlengkapan penyaring minyak yang terpasang.
Type of oil filtering equipment fitted:

- 2.2.1. Perlengkapan penyaring minyak (15 ppm) (Aturan 16 (4))
Oil filtering (15 ppm) equipment (Regulation 16 (4)).

- 2.2.2. Perlengkapan penyaring minyak (15 ppm) dengan alarm dan alat penghenti aliran otomat (aturan 16 (5)).
Oil filtering (15 ppm) equipment with alarm and automatic stopping device (Regulation 16 (5)).
-
3. Kapal diperbolehkan untuk beroperasi dengan perlengkapan yang lama sampai dengan tanggal 6 Juli 1998 (Aturan 16 (6)) dan diperlengkapi dengan:
The ship is allowed to operate with the existing equipment until 6 July 1998 (Regulation 16 (6)) and fitted with:
-
- 2.3.1. Perlengkapan pemisah air berminyak (100 ppm)
Oily-water separating (100 ppm) equipment.
-
- 2.3.2. Perlengkapan penyaring minyak (15 ppm) tanpa alarm.
Oil filtering (15 ppm) equipment without alarm.
-
- 2.3.3. Perlengkapan penyaring minyak (15 ppm) dengan alarm dan alat penghenti aliran manual.
Oil filtering (15 ppm) equipment with alarm and manual stopping device.
-
- 2.3.4. Alat ukur kandungan minyak (Resolusi A. 444 (XI)):
Oil Content meter (Resolution A. 444 (XI)):
1. dengan alat pencatat
with recording device
-
2. tanpa alat pencatat
without recording device
-
- Standar-standar yang disetujui
Approval standards :
- 2.4.1. Sistem pemisah/penyaring :
The separating/filtering system
1. yang telah disetujui sesuai dengan Resolusi A. 393 (X).
has been approved in accordance with Resolution A. 393(X)
-
2. yang telah disetujui sesuai dengan Resolusi A. 233 (VII)
has been approved in accordance with Resolution A. 233 (VII)
-
3. yang telah disetujui sesuai dengan standar-standar nasional yang tidak didasarkan pada Resolusi A. 393 (X) atau A. 233(VII)
has been approved in accordance with national standards not based upon Resolution A. 293 (X) or A. 233 (VII).
-
4. belum disetujui
has not been approved
-
- 2.4.2. Unit proses dietujui sesuai dengan Resolusi A. 444 (XI).
The process unit has been approved in accordance with Resolution A. 444 (XI).
-
- 2.4.3. Alat ukur kandungan minyak telah disetujui sesuai dengan Resolusi A. 393 (X).
The oil content meter has been approved in accordance with Resolution A. 393 (X).
-
- Debit maksimum sistem adalah m³/jam
Maximum throughput of the system is m³/h

5. Pengecualian terhadap Aturan 16.
Waiver of Regulation 16.

2.6.1. Kapal ini dikecualikan dari persyaratan Aturan 16 (1) atau (2) sesuai dengan Aturan 16 (3) (a).

The ship is waived from the requirement of Regulation 16 (1) or (2) in accordance with Regulation 16 (3)(a).

Kapal ini semata-mata digunakan pada:
The ship engaged exclusively on :

1. Pelayaran di dalam Daerah Khusus (2)
Voyage within Special Area (s)

2. Pelayaran dalam jarak 12 mil dari daratan terdekat diluar Daerah khusus (2) yang terbatas pada:
Voyage within 12 miles from the nearest land outside Special Area (s) restricted to :

2.6.2. Kapal ini dilengkapi dengan tangki penampung dengan isi m³ untuk menampung seluruh air bilga diatas kapal.

The ship is fitted with holding tank (s) having a volume of m³ for the total retention on board of all oily bilge water.

2.6.3. Dalam hal tidak memiliki tangki penampung kapal ini dilengkapi dengan tata susunan untuk memindahkan air bilga ke tangki endap.

In lieu of the holding tank the ship is provided with arrangements to transfer bilge water to the slop tank.

SARANA PENAMPUNGAN DAN PEMBUANGAN MINYAK RESIDU/KOTOR (ATURAN 17)

MEANS FOR RETENTION AND DISPOSAL OF OIL RESIDUES/SLUDGE (REGULATION 17).

3.1. Kapal ini dilengkapi dengan tangki minyak residu/kotor sebagai berikut;
The ship is provided with oil residue (sludge) tanks as follows;

Nama Tangki <i>Tank Identification</i>	Tangki <i>Tank</i>	Locasi <i>Location</i>	Isi (M 3) <i>Volume (M 3)</i>
	Gading dari -- ke <i>Frame from -- to</i>	Posisi melintang <i>Lateral position</i>	
			65,7
		Isi Total : <i>Total volume</i> M3	65,7 M3

- 3.2. Sarana untuk pembuangan minyak residu sebagai tambahan pada ketentuan tangki Minyak kotor.

Means for the disposal of residues in addition to the provisions of sludge tanks:

- 3.2.1. Alat membakar untuk minyak residu

kapasitas 0,24 m³/jam ... 1/Jam

Incinerator for oil residues

capacity 0,24 m³/h 1/h.

- 3.2.2. Ketel bantu yang dapat digunakan untuk membakar minyak residu

Auxilliary boiler suitable for burning oil residues.

- 3.2.3. Tangki untuk mencampur minyak residu dengan bahan bakar minyak,

kapasitas m³

Tank for mixing oil residues with fuel oil, capacity m³

- 3.2.4. Sarana lain yang dapat digunakan:

Other acceptable means :

SAMBUNGAN PEMBUANGAN STANDAR (ATURAN 19)

STANDARD DISCHARGE CONNECTION (REGULATION 19).

- 4.1. Kapal dilengkapi dengan suatu saluran pipa untuk pembuangan minyak residu dari bilga permesinan ke tempat penampungan, yang memiliki sambungan pembuangan standar memenuhi Aturan 19.

The ship provided with a pipeline for the discharge of residues from machinery bilges to reception facilities, fitted with a standard discharge connection in compliance with Regulation 19.

KONSTRUKSI (ATURAN 13, 24 DAN 25)

CONSTRUCTION (REGULATION 13, 24 AND 25)

- 5.1. Sesuai dengan ketentuan Aturan 13, kapal:

In accordance with the requirements of Regulation 13, the ship is :

- 5.1.1. Disyaratkan untuk dilengkapi dengan SBT, PL dan COW.

Required to be provided with SBT, PL and COW.

- 5.1.2. Disyaratkan untuk dilengkapi dengan SBT dan PL

Required to be provided with SBT and PL.

- 5.1.3. Disyaratkan untuk dilengkapi dengan SBT.

Required to be provided with SBT.

- 5.1.4. Disyaratkan untuk dilengkapi dengan SBT dan COW.

Required to be provided with SBT and COW.

- 5.1.5. Disyaratkan untuk dilengkapi dengan SBT dan CBT.

Required to be provided with SBT PL or CBT

- 5.1.6. Tidak disyaratkan untuk memenuhi persyaratan-persyaratan dari

Aturan 13.

Not required to comply with the requirements of Regulation 13.

5.2. Tangki Tolakbara Terpisah (SBT)

Segregated Ballast Tanks (SBT).

5.2.1. Kapal dilengkapi dengan SBT sesuai dengan Aturan 13.

The ship is provided with SBT in compliance with Regulation 13.

5.2.2. Kapal ini dilengkapi dengan SBT, sesuai dengan aturan 13, yang ditempatkan pada lokasi lindung sesuai dengan Aturan 13 E.

The ship is provided SBT, in Compliance with Regulation 13, which are arranged in Protective Locations (PL) in compliance with Regulation 13 E.

5.2.3. SBT dibagi-bagi sebagai berikut:

SBT are distributed as follows :

Tangki Tank	Isi Volume (m ³)	Tangki Tank	Isi Volume (m ³)
-	-	-	-
Total isi : = M3			
Total volume			

5.3. Tangki Tolakbara Bersih (CBT):

Dedicated Clean Ballast Tanks (CBT).

5.3.1. Kapal ini dilengkapi dengan CBT sesuai dengan Aturan 13 A, dan dapat dioperasikan sebagai pengangkut hasil olahan.

The ship is provided with CBT in compliance with Regulation 13 A, and may operate as a product carrier.

5.3.2. CBT dibagi-bagi sebagai berikut:

CBT are distributed as follows:

Tangki Tank	Isi Volume (m ³)	Tangki Tank	Isi Volume (m ³)
-	-	-	-
Total isi : = M3			
Total volume			

5.3.3. Kapal telah dibekali dengan sebuah Pedoman Kerja Tangki Tolakbara Bersih tertanggal

The ship has been supplied with a valid Decicated Clean Ballast Tank Operation Manual, which is dated

5.6. Pembatasan ukuran dan tata susunan tangki muatan (Aturan 24):

Limitation of size and arrangements of cargo tanks (Regulation 24) :

- 5.6.1.** Kapal disyaratkan untuk dibangun sesuai dengan, dan memenuhi persyaratan Aturan 24.

The ship is required to be constructed according to, and complies with, the requirements of Regulation 24.

- 5.6.2.** Kapal disyaratkan untuk dibangun sesuai dengan, dan memenuhi persyaratan Aturan 24 (4) (lihat Aturan 2(2)).

The ship is required to be constructed according to, and complies with, the requirements of Regulation 24 (4) (see Regulation 2 (2)).

5.7. Subdivisi dan Stabilitas (Aturan 25):

Subdivision and Stability (Regulation 25) :

- 5.7.1.** Disyaratkan untuk dibangun sesuai dengan, dan memenuhi persyaratan Aturan 25.

The ship required to be constructed according to, and complies with, the requirements of Regulation 25.

- 5.7.2.** Informasi dan data yang disyaratkan menurut Aturan 25 (5) dalam suatu bentuk yang disetujui telah diberikan ke kapal.

Information and data required under Regulation 24 (5) in an approved form have been supplied to the ship.

5.8. Konstruksi Lambung Ganda:

Double hull construction :

- 5.8.1.** Kapal ini disyaratkan untuk dibangun menurut Aturan 13 F dan memenuhi persyaratan :

The ship is required to be constructed according to Regulation 13 F and complies with the requirements of :

- ayat (3) (konstruksi lambung ganda)
paragraph (3) (double hull construction).

- ayat (4)(kapal tangki yang memiliki dek antara dengan konstruksi lambung samping ganda).
paragraph (4) mid-height deck tankers with double side construction).

- ayat (5) (cara lain yang diatur oleh komisi Perlindungan Lingkungan Laut).
paragraph (5) (alternative method approved by the Marine Environment Protection Committee).

- 5.8.2.** Kapal ini disyaratkan untuk dibangun menurut dan memenuhi persyaratan Aturan 13 F (7) (persyaratan dasar ganda).

The ship is required to be constructed according to and complies with the requirements of Regulation 13 F (7) (double bottom requirements).

- 5.8.3.** Kapal ini tidak disyaratkan untuk memenuhi persyaratan Aturan 13 F.

The ship is not required to comply with the requirements of Regulation 13 F.

- 5.8.4.** Kapal ini harus memenuhi Aturan 13 G. dan:

The ship is subject to Regulation 13 G and:

- disyaratkan untuk memenuhi Aturan 13 F paling lambat
is required to comply with Regulation 13 F not later than

2. ditata sedemikian sehingga tangki atau ruangan berikut ini tidak digunakan untuk pengangkutan minyak

is so arranged that the following tanks or spaces are not used carriage of oil

X

5.8.5. Kapal memenuhi Aturan 13 G.

The ship is subjected to Regulation 13 G.

-

PENAMPUNGAN MINYAK DI KAPAL (ATURAN 15)

RETENTION OF OIL ON BOARD (REGULATION 15)

- 6.1. Sistem pemantauan dan pengendalian pembuangan minyak.

Oil discharge monitoring and control system.

X

- 6.1.1. Kapal termasuk dalam kategoriA..... kapal tangki minyak sebagaimana ditetapkan dalam Resolusi A 496(XII) atau A. 586(14)* (corel bagi yang tidak perlu).

The ship comes under categoryA.... oil tanker as defined in Resolution A-496-(XII) or A. 586 (14) delete as appropriate).

X

- 6.1.2. Sistem ini terdiri dari:

The system Comprises :

1. Unit pengawasan
control unit
2. unit penaksir
computing unit
3. unit penghitung
calculating unit

X

-

-

X

X

- 6.1.3. Sistem ini:

The system is:

1. dipasang dengan sebuah "interlock" penjalanan
fitted with a starting interlock
2. dipasang dengan alat penghenti otomat
fitted with automatic stopping device

X

X

- 6.1.4. Alat ukur kandungan minyak telah disetujui menurut persyaratan Resolusi A. 393 (X) atau A. 586 (14) (corel yang tidak perlu yang dapat digunakan untuk:

The oil content meter is approved under the terms of Resolution A. 393 (X) or A. 586 (14) (delete as appropriate) suitable for:

1. minyak mentah
crude oil
2. minyak olahan hitam
black products
3. minyak olahan putih
white products
4. Minyak seperti bahan cair beracun sebagaimana terdaftar dalam Laporan Sertifikat.
Oil-like noxious liquid substances as listed in the attachment to the Certificate.

X

X

-

* tangki minyak dimana pletakan lunas, atau pada tahap pembangunan yang serupa akanan sesudah 2 Oktober 1986 harus dipasang dengan sistem yang diakui sesuai dengan usi A. 586 (14).

for tanks the keels of which are laid, or which are at a similar stage of construction, on or after 2 Oct 1986 it must be fitted with

Kapal telah dilengkapi dengan sistem pengawas dan pengendalian pembuangan minyak.
The ship has been supplied with on operations manuted for the oil discharge monitoring and control system.

5.2. Tangki endap.

Stop tanks.

6.2.1. Kapal dilengkapi dengan 2 tangki endap yang ditunjuk dengan kapasitas total 1.599,2 m³, yaitu 8 % dari kapasitas angkut minyak, sesuai dengan:

The ship is provided with 2 dedicated stop tank (s) with the total capacity of 1.599,2 m³, which is 8 % of the oil carrying capacity, in accordance with:

1. Aturan 15(2) (c)
Regulation 15(2)(c)
2. Aturan 15 (2)(c)(i)
Regulation 15(2)(c) (i)
3. Aturan 15 (2) (c) (ii)
Regulation 15 (2) (c) (ii)
4. Aturan 15 (2) (c) (iii)
Regulation 15 (2)(c) (iii)

6.2.2. Tangki muatan telah ditunjuk sebagai tangki endap.

Cargo tanks have been designated as slop tanks.

3. Alat deteksi batas permukaan antara minyak dan air:

Oil/water interface detectors :

6.3.1. Kapal dilengkapi dengan alat deteksi batas permukaan antara minyak dan air yang disetujui menurut persyaratan dari Resolusi MEPC. 5 (XIII).

The ship is provided with oil/water interface detectors approved under the terms of Resolution MEPC. 5 (XIII).

Pembebassan dari Aturan 15:

Exemptions from Regulation 15 :

6.4.1. Kapal dibebaskan dari persyaratan Aturan 15 (1), (2) dan (3) sesuai dengan Aturan 15 (7).

The ship is exempted from the requirements of Regulation 15(1), (2)and (3) in accordance with Regulation 15 (7).

6.4.2. Kapal dibebaskan dari persyaratan Aturan 15 (1), (2) dan (3) sesuai dengan Aturan 2(2)

The ship is exempted from the requirements of Regulation 15 (1),(2)and (3) in accordance with Regulation 2 (2)

Pengecualian terhadap Aturan 15 :

Waiver of Regulation 15 :

6.5.1. Persyaratan Aturan 15 (3) dikecualikan untuk kapal sesuai dengan Aturan 15(5) (b).

The requirements of Regulation 15 (3) are waived in respect of the ship in accordance with Regulation 15 (5) (b).

Kapal ini digunakan semata-mata pada:

The ship is engaged exclusively on:

1. Pelayaran tertentu sesuai Aturan 13 C;
Specific trade under Regulation 13 C

2. Pelayaran di dalam Daerah Khusus (2)

3. Pelayaran dalam jarak 50 mil dari daratan terlekat di luar Daerah Khusus dengan lamanya pelayaran 72 jam atau kurang terbatas pada :
Voyage within 50 miles from nearest land outside Special Area(s) of 72 hours or less in duration restricted to :

**TATA SUSUNAN PEMOMPAAN, SALURAN PIPA DAN PEMBUANGAN
(ATURAN 18),**
PUMPING, PIPING AND DISCHARGE ARRANGEMENTS (REGULATION 18)

- 7.1. Lubang pembuangan keluar kapal dari tolakbara terpisah terletak:
The overboard discharge outlets from segregated ballast are located

7.1.1. Di atas garis air

Above the waterline

7.1.2. Di bawah garis air

Below the waterline.

- 7.2. Lubang pembuangan keluar kapal, selain saluran induk pembuangan, untuk tolakbara bersih terletak * :
*The overboard discharge outlets, other than the discharge manifold, for clean ballast are located * :*

7.2.1. Di atas garis air.

Above the waterline

7.2.2. Di bawah garis air

Below the waterline.

- 7.3. Lubang pembuangan keluar kapal, selain dari saluran induk pembuangan, untuk tolakbara kotor atau minyak bercampur air dari tangki-tangki muatan terletak*:
*The overboard discharge outlets, other than the discharge manifold, for dirty ballast water or oil contaminated water from cargo tank areas located * :*

7.3.1. Diatas garis air

Above the waterline.

7.3.2. Di bawah garis air dalam hubungannya dengan bagian tata-susunan pengaliran sesuai dengan Aturan 18 (6) (e)

Below the waterline in conjunction with the part flow arrangements in compliance with Regulation 18 (6) (e).

7.3.3. Dibawah garis air.

Below the waterline.

- 7.4. Pembuangan minyak dari pompa muatan dan saluran minyak (Aturan 18 (4) dan (5)).

Discharge of oil from cargo pumps and oil lines (Regulation 18 (4) and (5)).

7.4.1. Sarana untuk mencerat semua pompa muatan dan saluran minyak setelah selesai pembongkaran muatan.

Means to drain all cargo pumps and oil lines at the completion of cargo discharge.

1. sisa minyak muatan dapat disalurkan ke sebuah tangki muatan atau tangki endap.

drainages capable of being discharged to a cargo tank or slop tank.

2. untuk penyaluran sisa minyak muatan ke darat dilengkapi suatu saluran khusus dengan diameter kecil.

for discharge ashore a special small diameter line is provided.

LA PENANGGULANGAN KEADAAN DARURAT PENCEMARAN MINYAK DI KAPAL (ATURAN 26)
SHIP BOARD OIL POLLUTION EMERGENCY PLAN (REGULATION 26).

- 8.1. Kapal dilengkapi dengan Pola Penanggulangan Keadaan Darurat Pencemaran minyak di kapal yang memenuhi Aturan 26.
- The ship is provided with a shipboard oil pollution emergency plan in compliance with Regulation 26.*

TATA SUSUNAN YANG SEPADAN UNTUK KAPAL TANGKI BAHAN KIMIA YANG MENGANGKUT MINYAK.
EQUIVALENT ARRANGEMENTS FOR CHEMICAL TANKERS CARRYING OIL.

- 9.1. Sebagai tata-susunan yang sepadan untuk pengangkutan minyak oleh kapal tangki bahan kimia, kapal dilengkapi dengan perlengkapan tersebut dibawah ini sebagai pengganti dari tangki tangki endap (lihat paragraf 6.2.) dan detektor-detektor permukaan antara minyak/air (liha' paragraf 6.3).

As equivalent arrangements for the carriage of oil by a chemical tanker, the ship is fitted with the following equipment in lieu of slop tanks (paragraph 6.2. above) and oil/water interface detectors (paragraph 6.3. above):

- 9.1.1. Perlengkapan pemisah air berminyak yang mampu menghasilkan aliran dengan kadar minyak kurang dari 100 ppm, dengan kapasitas m³/jam.

Oily-water separating equipment capable of producing effluent with oil content less than 100 ppm, with the capacity of m³/h.

- 9.1.2. Sebuah tangki penampung dengan kapasitas m³.
A holding tank with the capacity of m³.

- 9.1.3. Sebuah tangki untuk menampung bekas cucian tangki yaitu:
A tank for collecting tank washings which is:

1. sebuah tangki yang diperuntukkan untuk itu
a dedicated tank
2. sebuah tangki muatan yang ditunjuk sebagai sebuah tangki penampung
a cargo tank designated as a collecting tank.

- 9.1.4. Sebuah pompa angsur yang dipasang tetap untuk pembuangan ke luar kapal dari aliran yang mengandung minyak melalui perlengkapan pemisah air berminyak.

A permanently installed transfer pump for overboard discharge of effluent containing oil through the oilwater separating equipment.

- 9.2. Perlengkapan pemisah air berminyak telah disetujui menurut persyaratan dari Resolusi A. 393 (X) dan cocok untuk semua hasil olahan yang tercantum dalam Annex I.

The oily-water separating equipment has been approved under the terms of Resolution A. 393 (X) and is suitable for the full range Annex I products.

- 9.3. Kapal memiliki Sertifikat Kelaihan untuk Pengangkutan Bahan-bahan Kimia Berbahaya dalam bentuk Curah.

The ship holds a valid Certificate of Fitness for the Carriage of Dangerous Chemicals in Bulk.

LIKE NOXIOUS LIQUID SUBSTANCES

- 10.1. Kapal ini telah diijinkan sesuai dengan persyaratan Aturan 14 Annex II dari Konvensi untuk memuat minyak-seperi bahan-bahan cair beracun yang tercantum dalam daftar * terlampir
*The Ship is permitted in accordance with Regulation 14 of Annex II of the Convention to carry the oil-like noxious liquid specified in the list * attached.*

PEMBEBASAN EXEMPTION

- 11.1. Pembebasan telah diberikan oleh Pemerintah atas persyaratan Bab II dan III dari Annex I Konvensi sesuai dengan Aturan 2 (4) (a) mengenai butir-butir yang tercantum dalam Paragraf (2)

..... dari catatan ini.

Exemptions have been granted by the Administration from the requirements of Charge II and III of Annex I of the Convention in Accordance with Regulation 2 (4) (a) those items listed under paragraph (s)

..... of this Record.

PADANAN (ATURAN 3)

EQUIVALENTS (REGULATION 3).

- 12.1. Padanan telah disetujui oleh Pemerintah untuk persyaratan tertentu dari Annex I mengenai butir-butir yang tercantum dalam paragraf (2) :
..... dari catatan ini.

*Equivalents have been approved by the Administration for certain requirements of Annex I on those items listed under paragraph (s) :
..... of this Record.*

JAN INI DINYATAKAN bahwa Catatan ini seluruhnya benar.

IS TO CERTIFY that this Record is Correct in all respects.

SPECIFICATION OF SASAKURA-TURBULO SEPARATING TANK (OILY WATER SEPARATOR)

Ship No. 307
 Rule: LR/BEL
 Mfd. No.: 055-3058

Checked by *[Signature]*
 Drawn by *[Signature]*
 Date: 11-17-1981

1. Particulars

Model	TFU - 5 (B)	Name plate	English.
No. of set per ship	1 set		
Capacity	5.0 m³/h (Max.)	Painting color	Munsell No. 2.5GY8/2
Working press.	Shell up to 2.6 kg/cm²G Heating element 3.0 kg/cm²G	Unit	Metric
Power source	Level cont.: AC 220 V 50Hz 1Φ		

Performance	Obtained an approval from the Ship Equipment Inspection Society of Japan for "15ppm Oily Water Separating Equipment" as a result of the test witnessed by the same association, wherein the test was conducted in accordance with the test standard specified by IMCO Resolution A.393(x) for the purpose of conforming to the ANNEX I of 1973 MARPOL Convention as modified by its Protocol of 1978.
性能	IMCO 73年条約及び 1978 年議定書の付属書1「油による汚染のための規則」に適合させることを目的として、IMCO 決議 A.393(X)基準試験において、財團法人日本船用品検査協会の立会試験結果、「15 ppm 用油水離隔装置」そして同協会の承認を得たものである。
Pump	Piston, Screw, Plunger or equivalent

2. Materials

Part	Materials
Shell	steel plate (inside of shell to be coated with anti-corrosive paint)
Catch plate (Pri.)	special polyvinyl chloride
Collecting pipe (Pri.)	hard polyvinyl chloride

3. Accessories

Article	Q'ty	Article	Q'ty
level controller (KTS)	1 set	Strainer	1
Magnetic valve	1	Air vent valve	1
Pressure regulating valve	1	Drain valve	2
Pressure gauge (with cock)	3 sets	Steam heater	1 set
Cock	4	Trunk stemmer for differential monitor	1 set
Safety valve (primary column)	1		
Sampling cock	1	Oil content monitor (TYPE: oil a type)	1 set

4. Spares

See the Attached Lists

Drawing List

Title of Drawing	Drawing No.	Title of Drawing	Drawing No.

Remarks

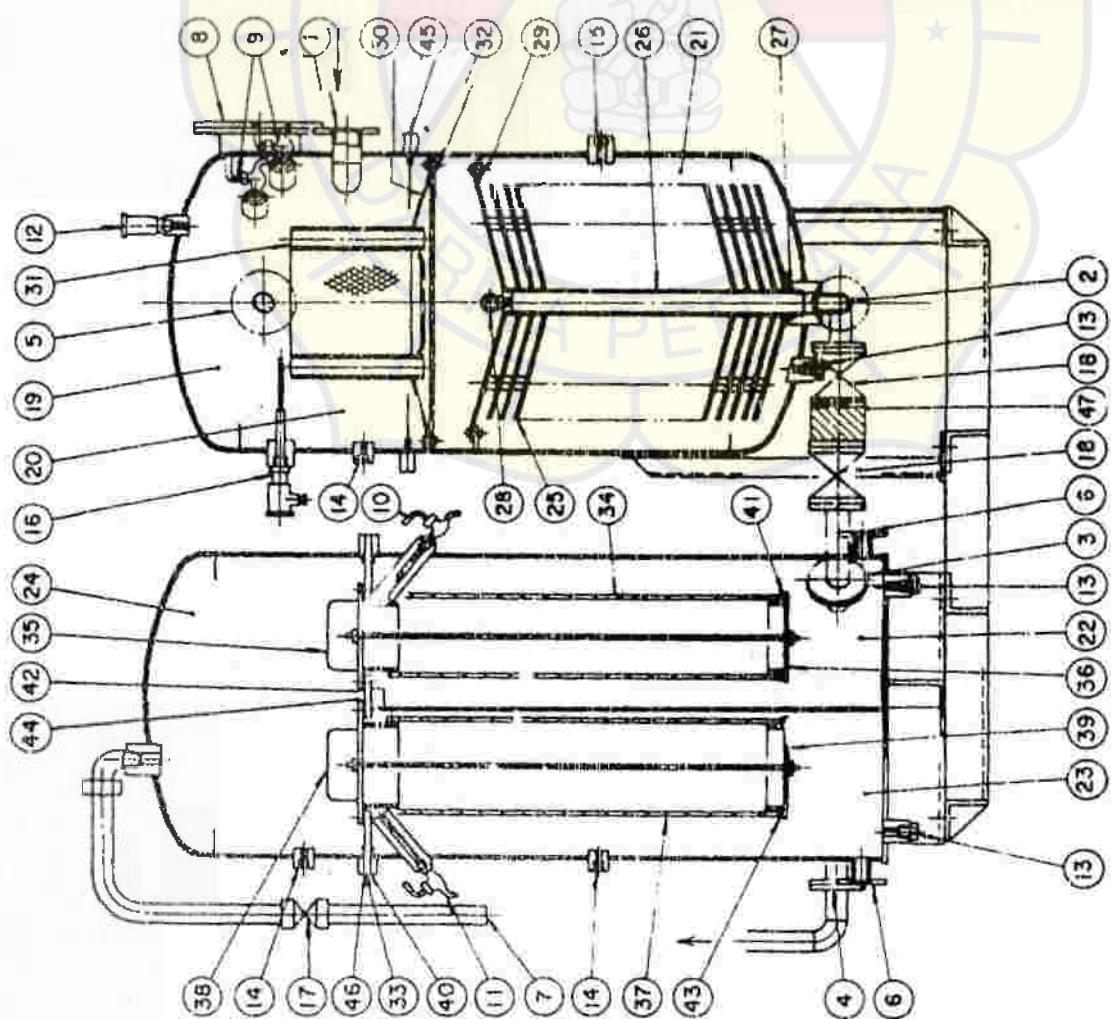

Harmonee of SK-TURBULO SEPARATING TANKS has been authorized by SHIP EQUIPMENT INSPECTION CIETY OF JAPAN and therefore all performance tests at shop and onboard are not to be carried out. 団法人、日本船用品検査協会により承認され、それが、油水分離器であるので工場および船上で試験を行いたしません。

CIL-ALYZER

BILGE ALARM (TYPE A)

1. Measuring method Turbidity with acoustic homogenization
2. Measuring range 0 - 20 ppm
3. Measuring accuracy ±5 ppm at 15 ppm
4. Alarm set point 15 ppm
5. Measuring interval 4 sec. (Continuous sampling)
6. Response time Within 20 sec. ✓
7. Operation Local
8. Sample pressure 0.4 - 3 kg/cm²
9. Sample flow 1 l/min.
10. Cleaning Washing water: Sea or fresh water
(Press. 0.4 - 7 kg/cm², flow 1 l/min.)
Wiper: Mechanical wiper for optical cell cleaning
11. Output signal and alarm lamp
 - Output signal: 4 to 20 mA DC
(Load resistance: less than 600Ω)
 - Alarm lamp:
 - 1) "15 ppm ALARM" lamp on when oil content exceeds 15 ppm.
 - 2) "SENSOR ALARM" lamp on when a. Photo device and electronics are failed,
b. Abnormal contamination in measuring cell is detected or
c. Abnormal heat up of the homogenizer is detected.
 - Alarm contacts: Single pole double throw contacts are provided for each case when
 - 1) Oil content exceeds 15 ppm or
 - 2) Abnormal condition in the instrument occurs.Each contact is for 115V AC, 1A. DC 30V, 1A (resistance load)
- Power requirements AC 100V, 110/115V, +10%, 50Hz, ±5%
Power consumption: Approx. 200 VA
- Environmental conditions
 - Ambient temp. : 0 - 50 °C
 - Ambient humidity: 10 - 90% RH
 - Vibration : ±1mm P-P (2 - 13.2 Hz)
±0.1g (13.2 - 80 Hz)
 - Inclination : 22.5° (in any direction)
 - Sway : ±22.5° from vertical, 10 sec.
- Color
 - Case : Murseli 20073/2
 - Front panel : Black (White characters)
- Mounting Wall-mount
- Dimensions Approx. 300mm(W) x 400mm(H) x 180mm(D)
- Weight Approx. 24kg

22. PROVIDE A PIPE FOR SEA WATER INLET WITH PUMPS SUCTION SIDE. A STRAINER WITH MORE THAN 24 MESH SHOULD BE PROVIDED FOR PUMPS SUCTION SIDE. INSTALL THE OIL COLLECTING TANK LOWER THAN SEPARATOR AS POSSIBLE.

23. PROVIDE A PIPE FOR SEA WATER INLET WITH PUMPS SUCTION SIDE. A STRAINER WITH MORE THAN 24 MESH SHOULD BE PROVIDED FOR PUMPS SUCTION SIDE. INSTALL THE OIL COLLECTING TANK LOWER THAN SEPARATOR AS POSSIBLE.

24. PROVIDE A PIPE FOR SEA WATER INLET WITH PUMPS SUCTION SIDE. A STRAINER WITH MORE THAN 24 MESH SHOULD BE PROVIDED FOR PUMPS SUCTION SIDE. INSTALL THE OIL COLLECTING TANK LOWER THAN SEPARATOR AS POSSIBLE.

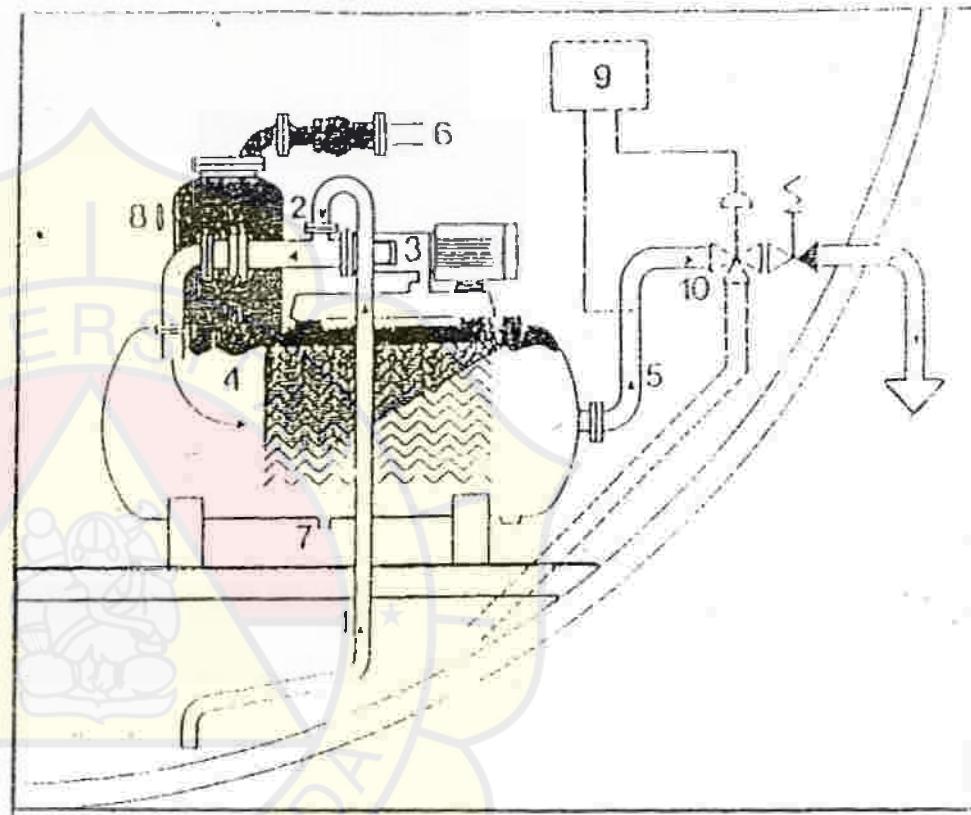

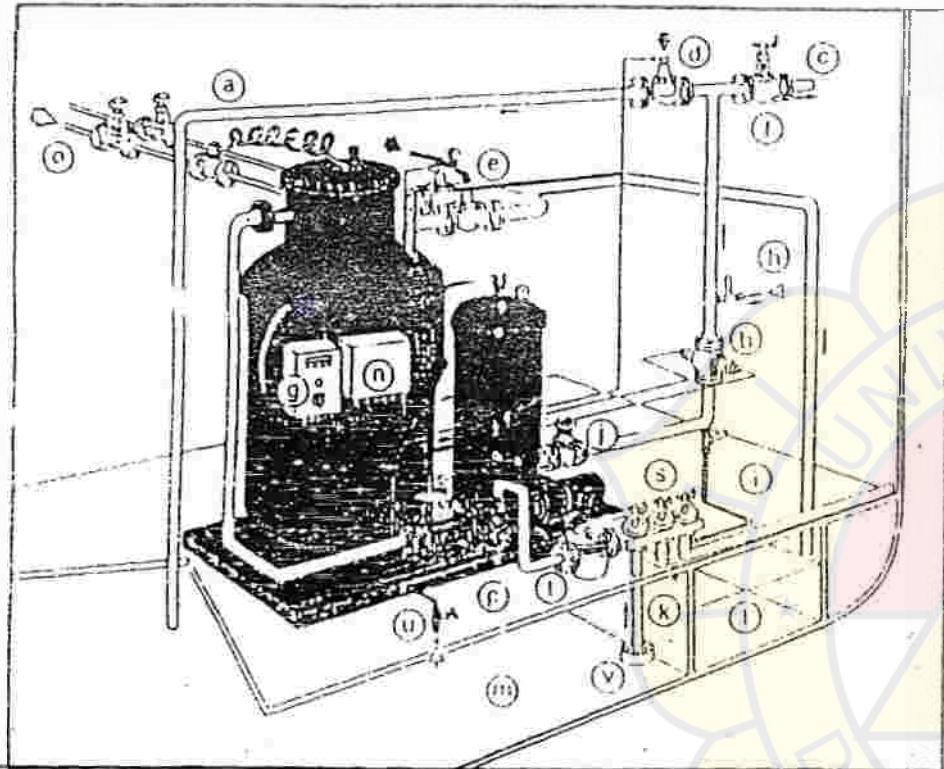

25. PROVIDE A PIPE FOR SEA WATER INLET WITH PUMPS SUCTION SIDE. A STRAINER WITH MORE THAN 24 MESH SHOULD BE PROVIDED FOR PUMPS SUCTION SIDE. INSTALL THE OIL COLLECTING TANK LOWER THAN SEPARATOR AS POSSIBLE.

26. PROVIDE A PIPE FOR SEA WATER INLET WITH PUMPS SUCTION SIDE. A STRAINER WITH MORE THAN 24 MESH SHOULD BE PROVIDED FOR PUMPS SUCTION SIDE. INSTALL THE OIL COLLECTING TANK LOWER THAN SEPARATOR AS POSSIBLE.

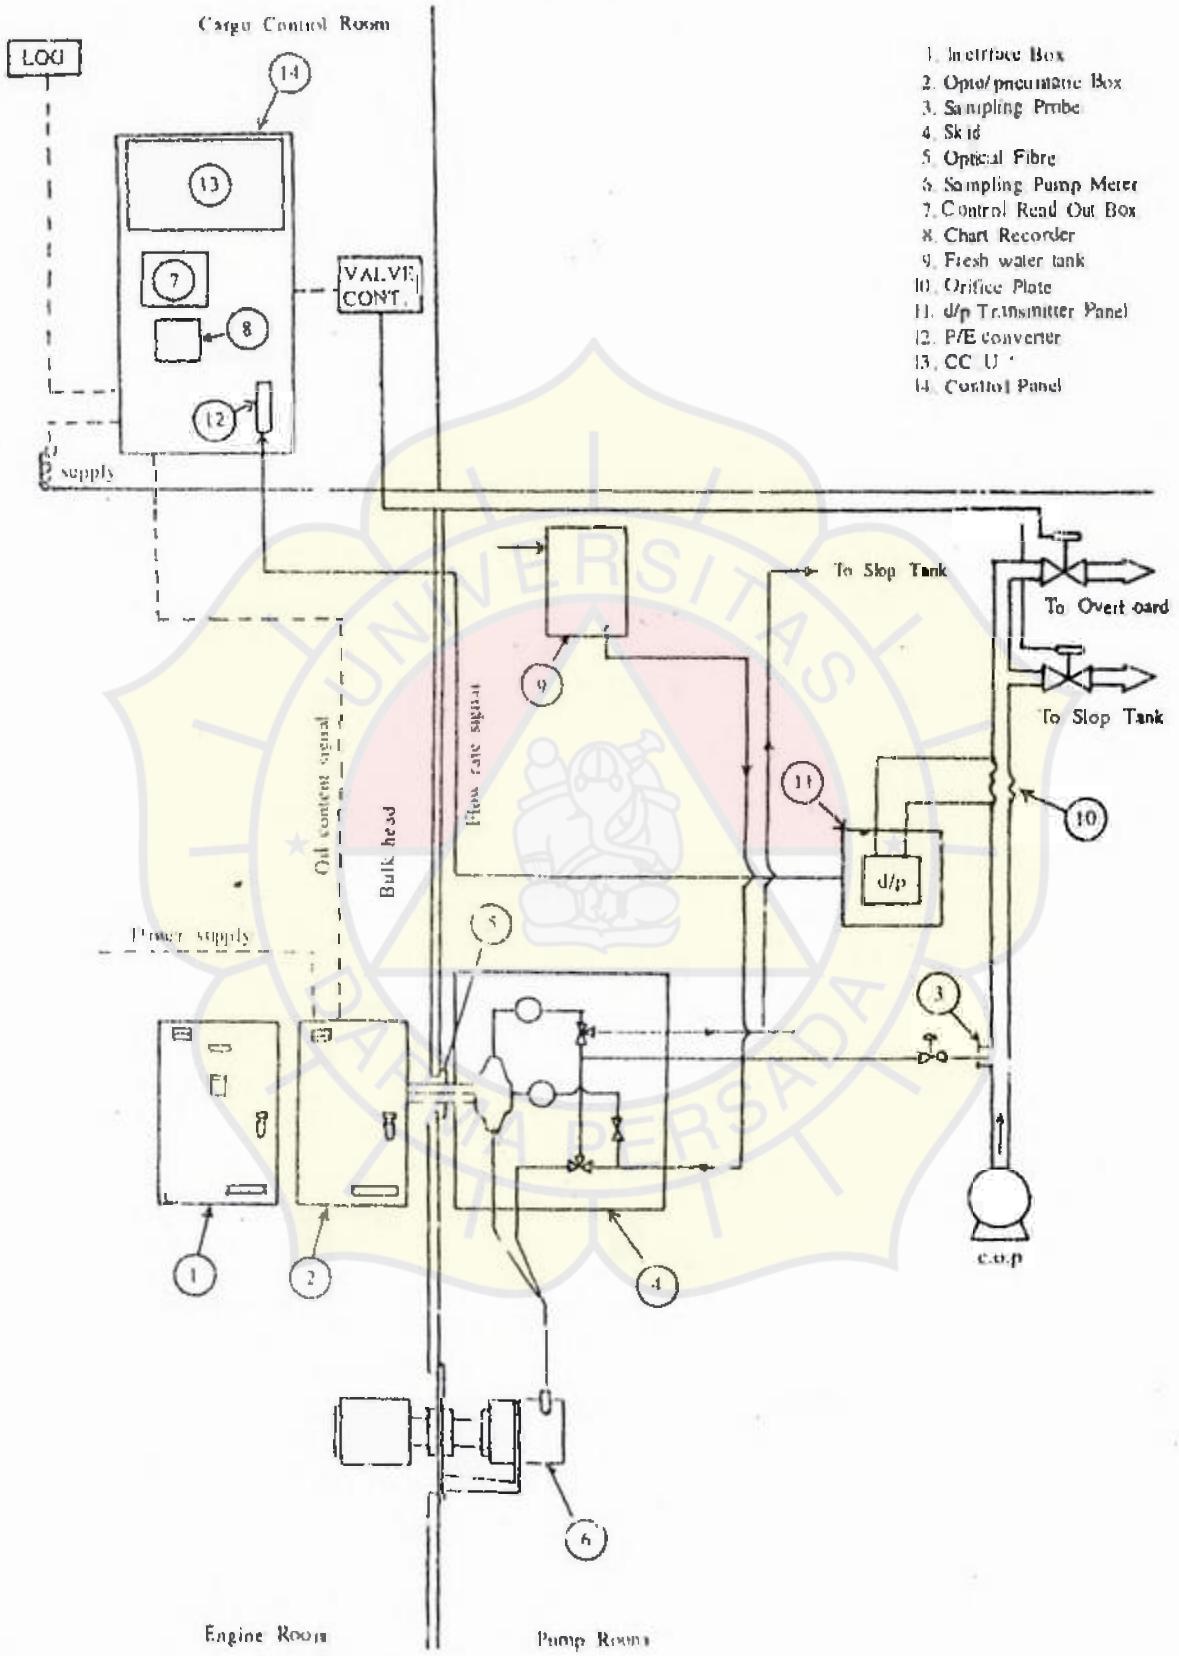

combined with a 2nd stage with
Coalescer Cartridges

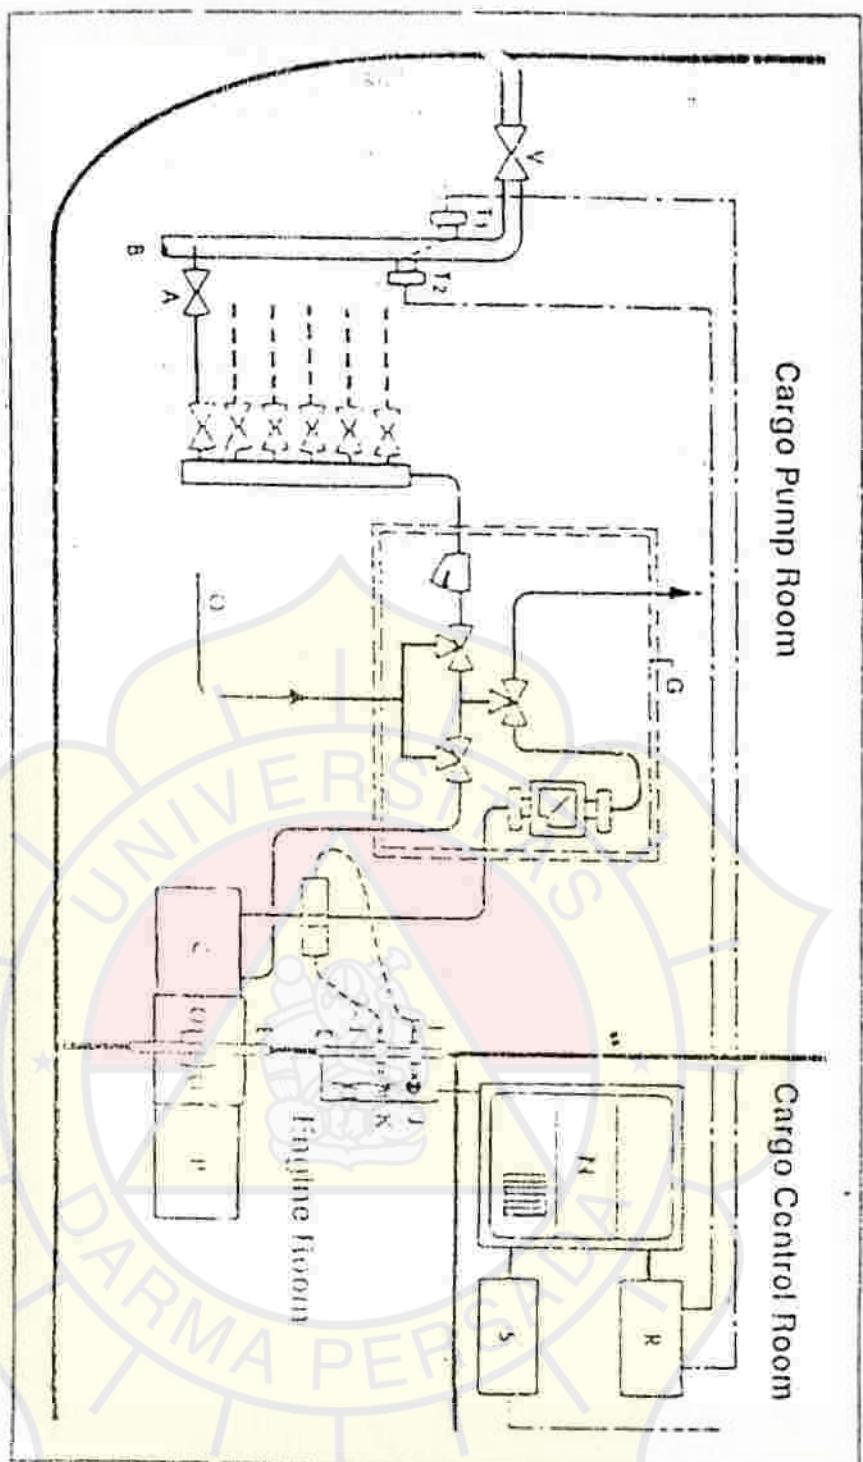

System with Coalescing Plates

Various Types of Oily Water Separators

O.D.M.

Definition

V = ballast discharge valve

B = discharge pipe

A = sample cock

G = wet control catalytic

H = measuring cell

C = sample pump

I = flora optics

J = optical projector

K = photoelectric cell

L = electronic box

M = flow meter

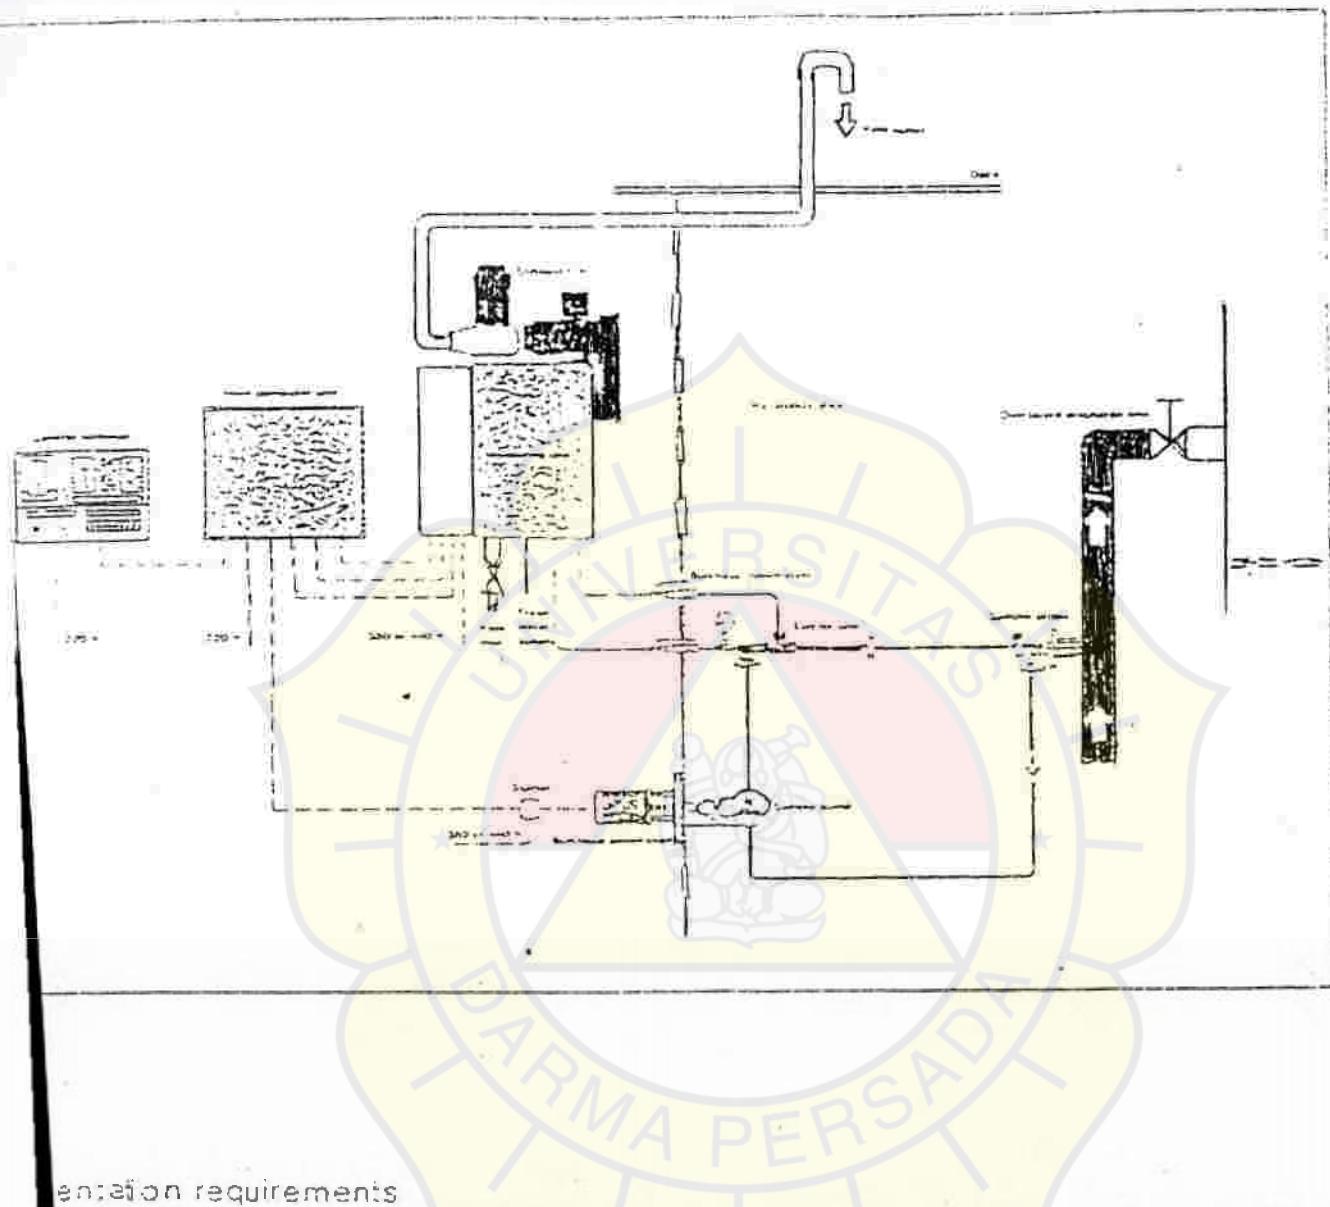

N = how meter

O = sealing state

P = electronotor

Installation of an Oil Discharge Monitoring and Control System
with Regard to the Separation of Gas Spills
and Gas Dangerous Spares

OIL DISCHARGE MONITOR

en:ation requirements

	Category 'A'	Category 'B'
Ship type	> 4000 dwt	1500-4000 dwt
Engine interlock	Control unit	Computing unit
Board discharge control	Yes	No
Rate input	Automatic*	Manual
Input	Automatic*	Manual

Construction/arrangement

No.	Component	Location	Construction/function
1	(1) Dirty ballast skid Measurement cell (2) Pneumatic valves (3) Window wash pump (4) Flow monitor	Pump room	To measure the oil content in sample water passing through the cell by laser ray. To changeover water flow For window cleaning To detect flow of sample water
2	Sample pump		Composed of pump, gas tight seal and motor mounted with flange To supply and homogenize water
3	(1) opto pneumatic box Optical transmitter (2) Optical receiver (3) Signal conditioning (4) Auto sequence (5) Interface (6) Control (7) Power supply	Engine room	To transmit laser ray To detect laser ray from measurement cell To convert oil content signal to 4-20 mA Alarm detection circuit is contained Interface circuit for Opto box control read out box Sequence control circuits 12V and 24V power supply
4	Interface box		Composed of transformer fuses switch etc
5	(1) Control read out box POWER ON/OFF switch (2) SAMPLE switch (3) SAMPLE SELECT switch (4) BLACK/WHITE switch (5) SET ALARM (6) BITE switch (7) FAULT ATTENDED switch (8) SYSTEM FLUSH switch (9) WINDOW (LEAN switch (10) Digital read out	Cargo Control Room	To start-up and shut-down To start sampling To select sample point To select oil type To alarm level of oil content For function check To stop alarm To carry out manual flushing To carry out manual window cleaning To indicate oil content
6	Chart recorder		To record oil content in analogue

Performance specification

- a. Effective measuring range : 0-1000 ppm
- b. Measuring accuracy : $\pm 10\text{ppm}$ or ± 20 percent of the actual oil content whichever is greater.
- c. Response time : less than 10 seconds
- d. Sample flow rate : 800-1100 L/h
- e. Zero noise : less than 2 ppm
- f. Alarm adjustment : 0-1000 ppm
- g. Oil content indication : digital
- h. Records : analogue
