

## BAB V

### KESIMPULAN

1. Dari hasil rancangan ini untuk *frekuensi* 23 GHz dengan ketinggian antena dari permukaan laut 38 meter pada BTS Spotec dan ketinggian antena dari permukaan laut 45 meter pada Kolektor BTS Simpang Batu Sari menunjukkan masih ada jarak dari *LOS* sebesar 6,193 meter.
2. Dari hasil perhitungan rancangan untuk *Uplink* diperoleh *RSL* sebesar -35 dBm dan *Fade Margin* sebesar 46 dB (Reliabilitasnya = 99,9972 %) sedangkan untuk *Downlink* diperoleh *RSL* sebesar -35,38 dBm, dan *Fade Margin* sebesar 45,62 dB (Reliabilitasnya = 99,9968 %). Kualitas penerimaan sinyal melebihi dari *Reliability* standart 99,995 %.
3. Dari hasil perhitungan dalam rancangan diperoleh *Eb/No* untuk *Uplink* didapat sebesar 60,85 dB dan untuk *Downlink* sebesar 60,47 dB. Sedangkan untuk mencapai standar  $BER = 10^{-6}$  (QPSK), diperlukan *Eb/No* sebesar 10,6 dB sehingga kualitas penerimaan sinyal diatas standar ( $BER < 10^{-6}$ ).

The logo of Universitas Darma Persada is a large, light yellow, multi-lobed emblem. It features a central shield with a red top section and a white bottom section. The shield is surrounded by a circular border containing the text 'UNIVERSITAS' at the top and 'DARMA PERSADA' at the bottom, separated by two small stars. The main title 'LAMPIRAN 1' is printed in a large, bold, black serif font across the center of the emblem.

## Nokia FlexiHopper™ Microwave Radios – fast set up of transmission links

Nokia FlexiHopper™ Microwave Radios allow transmission links to be established rapidly. These versatile radios can be set up quickly and easily to meet a variety of transmission needs, bringing cost savings and helping rapid network rollout.

Operating in the 13, 15, 18, 23, 26 and 38 GHz frequency bands, Nokia FlexiHopper Microwave Radios can be used for many communication needs providing connections e.g. in cellular, fixed and dedicated networks.

The Nokia FlexiHopper Microwave Radio comprises an outdoor unit and an indoor unit, which can be selected from four different models. In the Nokia MetroSite™ and Nokia UltraSite™ solution the indoor unit (FC RRI or FXC RRI) is fully integrated in the base station. The radio and BTS is connected using a single Nokia Flexbus™ cable allowing fast and simple installation. Nokia FlexiHopper Microwave Radios can also be easily deployed from existing Nokia Talk-family Base Station sites with the BTS integrated RRIC indoor unit. This offers a cost effective way to maximise the usage of existing sites. Another option is to use the modular FIU 19 indoor unit which provides general telecommunications interfaces and mounts to a standard 19" rack.

A totally new level of flexibility  
Nokia FlexiHopper Microwave Radios bring a new level of versatility when both network capacity and coverage are required.

All the features below can be used to tailor and reconfigure the transmission for fast and low cost rollout and expansion, even when last minute changes are unavoidable.

- Four different indoor unit types.
- A single indoor unit can support multiple Nokia FlexiHopper Microwave Radios and/or Nokia MetroHopper Radios.
- Nokia Flexbus interconnections between units – Nokia Flexbus is also used for carrying connections between separate indoor units via a single cable.
- Radio and software controlled cross connection integrated.
- Software programmable transmission capacity.

### Fast and easy to install

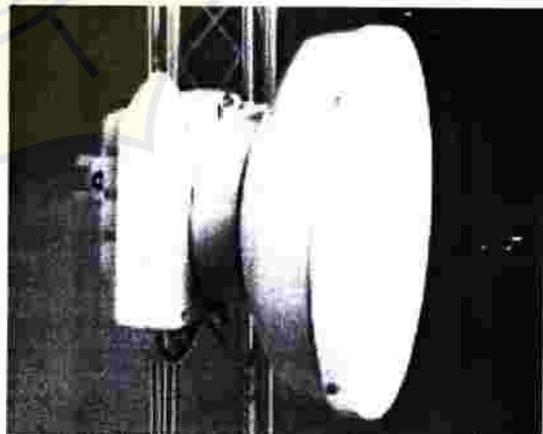

Lightweight and compact size of the Nokia FlexiHopper Microwave Radio simplify site acquisition and installation. In many cases, Nokia FlexiHopper Microwave Radio can be installed in locations unsuitable for other transmission methods. Valuable space on the site is saved and complicated cabling avoided, as one indoor unit is capable of supporting several outdoor units. Indoor units

are simply plugged into position in other Nokia equipment environment and Nokia Flexbus cable used to connect the units together.

### Access you can rely on

Nokia FlexiHopper Microwave Radios help improve your network's availability by offering superior transmission reliability. A variety of advanced features are used to achieve an availability better than any leased line solution. These include:

- Adaptive level control with quality measure (ALCO) adjusts power to maintain transmission quality regardless of the weather.

**Quante**

Quante  
Netzwerke GmbH

**NOKIA**

CONNECTING PEOPLE

- Forward error correction improves radio performance in demanding conditions.
- Automatic fading margin measurement during commissioning.
- Several protection methods: hot standby, frequency and space diversity.
- High Mean Time Between Failure ratio.

When combined with Nokia's network reliability features, such as loop protection, you can achieve virtually

error free transmission in even the most demanding conditions.

#### Main benefits

- Nokia Flexbus single cable interconnections together with integrated software controlled cross connections provide revolutionary easy and flexible site configurations.
- Four different indoor units, either fully Nokia integrated or 19", for all transmission requirements.

- Common indoor unit platform for both Nokia FlexiHopper Microwave Radios and Nokia MetroHopper Radios.
- One indoor unit supports multiple outdoor units – saves equipment and installation costs and reduces space requirements.
- Versatile design with a single platform for all frequencies.
- Compact and easy to install outdoor unit with integrated low profile or square antennas speed up roll out.

### Technical Specifications of Nokia FlexiHopper Microwave Radio / Outdoor Unit

General	13	15	18	23	26	38
Frequency range (GHz)	12.76– 13.24	14.51 – 15.34	17.71– 19.69	21.23–23.60	24.55 –26.45	37.05 –39.44
Transmission capacity	2 x 2, 4 x 2, 8 x 2 or 16 x 2 Mbit/s (Software programmable)					
Modulation	QPSK					
Channel spacing (MHz)	3.5–28.0 depending on capacity
