

BAB V

PENUTUP

5.1 Kesimpulan

Dari aplikasi sistem pakar tipe dasar manusia yang telah dibuat, dapat ditarik kesimpulan seperti berikut:

1. Sistem pakar diagnosa tipe dasar manusia terdiri dari modul tanya jawab, user berinteraksi dengan sistem pakar dengan cara menjawab pertanyaan yang diberikan, kemudian mendapatkan kesimpulan (solusi) beserta saran.
2. Sistem pakar ini bukan menggantikan posisi seorang psikologi tetapi hanya memiliki makna konsultatif bagi pemakainya.
3. Representasi knowledge berupa pohon knowledge diimplementasikan dalam bentuk database yang terdiri dari tabel sifat, tabel penyakit, tabel diagnosa dan table exp_fcl.
4. Metode algoritma inference pada sistem diagnosa tipe dasar manusia terjadi pertama sekali Sistem Pakar(SP) menanyakan pertanyaan yg berada di record paling atas dari tabel diagnosa. Jika user menjawab YA :Check isi data pada field YA.Jika isi data pada field YA inisial awalnya adalah G, maka : Melompat ke record yang field ID nya sama dengan ID pada filed YA tersebut.Jika isi data pada field YA inisial awalnya adalah S, maka: Ditemukan sifat dan pertanyaan berhenti. Jika user menjawab TIDAK : Check isi data pada field TIDAK. Jika isi data pada field TIDAK inisial awalnya adalah G, maka : Melompat ke record yang field ID nya

sama dengan ID pada field TIDAK tersebut. Jika isi data pada field TIDAK inisial awalnya adalah S, maka : Ditemukan sifat dan pertanyaan berhenti.

5.2 Saran

Penulis memberikan saran yang diusulkan untuk memperbaiki kekurangan diagnosa tipe dasar manusia dengan metode tanya jawab secara sistem pakar adalah:

1. Mengembangkan sistem pakar ini dengan menambahkan *knowledge base* baru bila terdapat perkembangan-perkembangan yang belum terjangkau, sehingga pemecahan masalah tidak monoton dan selalu mengikuti kemajuan teknologi ilmu psikologi.
2. Faktor kepastian dalam mendiagnosa sifat merupakan hal yang penting, menentukan derajat kepercayaan terhadap hasil yang diberikan maka derajat kepercayaan pengguna semakin tinggi.
3. Sistem pakar untuk mendiagnosa tipe dasar manusia ini diharapkan dapat membantu *user* yaitu pasien atau calon psikolog sebagai evaluasi pembanding tentang diagnosa sementara yang disimpulkan.
4. Perlu adanya analisis dari seorang pakar eneagram atau tipe dasar manusia tentang hasil diagnosa pada aplikasi sistem pakar diagnosa tipe dasar manusia.
